## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

NOTE: the term "resist" in the claims will be defined as "something that protects against a chemical, electrical, or physical action." Any layer would read on the claimed "resist" since any layer will inherently provide some type of physical and/or chemical protection.

The examiner finds support for this definition from Merriam Webster's Collegiate Dictionary.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Gause et al (US 3,895,198). Gause teaches a metal clad laminate constructed by sandwiching a resin impregnated core paper between epoxy resin impregnated woven glass fabric sheets (herein relied upon to read on the claimed "resist") (abstract). The cellulose papers may be treated with phenolic resin (col 6, line 39+). The metal cladding may comprise copper (col 7, line 20).
2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Nomura (US 4,029,845). Nomura teaches a base board for a printed circuit prepared from a laminate comprising at least one sheet of prepeg comprising a thermosetting resin as impregnate and a layer of composition comprising a semi-cured thermosetting resin and a nitrile rubber (herein relied upon to read on the claimed "resist") on both

sides of said prepeg layer (abstract). The prepeg comprises a paper impregnated with a phenolic resin (col 3, lines 18+). A copper foil may be applied to said base board (col 1, lines 29+).
